

BUILT SPECIFICALLY FOR ZAMBIAN SECURITY COMPANIES

The complete workforce, ZRA Smart Invoice & NAPSA payroll platform

Eliminate ghost guards, manual roster errors and billing disputes.
DeployGuard combines explainable AI guard scheduling, hard compliance
gates, WhatsApp field check-ins, 100% Zambian statutory payroll, and
native ZRA Smart Invoice fiscal signing — in one platform.

ZRA Smart Invoice native

NAPSA · NHIMA · WCF · PAYE

Explainable guard scoring

WhatsApp field assistant

1

Explainable AI scoring

Every guard suggestion shows the full point
breakdown — reliability, site familiarity,
fairness, AWOL history. No black box.

2

Hard compliance gates

Expired licences, wrong grade, exclusions and
leave physically block an assignment — not just
a warning that gets ignored.

3

Native Zambian compliance

NAPSA, NHIMA, WCF and PAYE calculated
automatically, with direct ZRA Smart Invoice
VSDC fiscal signing built in.

THE PROBLEM IN ZAMBIA

Solving revenue leakage in security operations

Zambian security operations lose real money to paper posting sheets, manual Excel rosters, and disconnected billing systems. Supervisors signing off on unworked shifts and disputed invoice hours quietly destroy margins every month.

4-7%

Payroll leakage recovered

Eliminates unworked ghost shifts and payroll errors.

80%

Faster billing sign-off

Verified attendance attached to every client invoice.

100%

ZRA & NAPSA compliant

Built-in Zambian tax brackets and VSDC fiscal compliance.

Operational traps DeployGuard closes

OPERATIONAL TRAP	IMPACT ON ZAMBIAN FIRMS	DEPLOYGUARD OS SOLUTION
Ghost guard sign-ins	Supervisors sign paper sheets for missing guards — drains 4-7% of payroll monthly.	GPS mobile check-in + WhatsApp enforces geofencing and guard photo verification.
Disputed invoices	Clients refuse to pay without verified attendance logs — stretches payment to 90 days.	Client service reports attach verified attendance sheets directly to every invoice.
ZRA non-compliance	Invoices lacking ZRA VSDC fiscal signatures face penalties and client rejection.	ZRA Smart Invoice API automatically signs invoices and generates QR codes.

Live in the Rostering Hub

This is not a mockup — it's an actual DogForce production roster, showing real-time coverage, unassigned-slot flagging, and one-click Auto-Assign across a live client site.

BUILT FOR FIELD CONTROL

Three things no generic scheduler can do

Most workforce platforms were built for retail shift-swapping and adapted to security. DeployGuard was designed around how a security company actually operates — from grade and firearm licensing to fiscal invoicing.

1

Explainable guard scoring

Competitors use a "black-box" auto-scheduler that controllers cannot audit. DeployGuard's scoring engine ranks every candidate and shows the exact point breakdown behind each assignment — so a controller can defend every roster decision.

Candidate: Officer John Phiri — Grade A, Lusaka Central

Total Fit Score: 95 / 100

Reliability score	+85 (98% on-time check-in record)
Site familiarity bonus	+20 (16 shifts at Bank of Zambia branch)
Fairness adjustment	−10 (48 hrs worked this week)
AWOL penalty	0 (zero infractions, last 90 days)

2

Hard compliance gates

Soft warnings get ignored under operational stress. DeployGuard physically blocks an assignment — not just flags it — when any of the following are true:

- ×

Guard's firearm licence is expired
- ×

Guard's grade does not match the site's minimum requirement
- ×

Guard is listed on the client/site exclusion register
- ×

Guard is on approved leave for that date

3

WhatsApp field assistant

Field supervisors don't always carry laptops or expensive data bundles. DeployGuard's native WhatsApp bridge lets supervisors record site arrivals, report AWOL guards, and request shift replacements directly over WhatsApp text or voice note — streaming straight into the in-app control room for dispatchers.

NATIVE LOCALIZATION MODULE — SECURITY_L10N_ZM

100% Zambian statutory payroll & fiscal billing

Built-in Zambian statutory rules configured out of the box — eliminating manual Excel tax formulas and the compliance risk that comes with them.

STATUTORY BODY	ZAMBIAN LEGAL RULE & RATE	DEPLOYGUARD AUTOMATED EXECUTION
NAPSA National Pension	5% employee + 5% employer contribution, enforcing monthly statutory ceiling caps.	Calculated automatically with pre-tax deductibility rules applied before PAYE.
NHIMA Health Insurance	0.5% employee + 0.5% employer health insurance contribution.	Itemized separately on payslips and summarized in monthly statutory remittance reports.
WCF Levy Workers' Compensation	Annual employer risk assessment levy calculated on total gross payroll.	Tracked automatically per pay period for year-end statutory reconciliation.
PAYE Tax ZRA Tax Bands	ZRA progressive tax brackets, from the tax-free threshold to the top marginal band.	Correct tax withholding calculated every pay run, across normal and overtime pay.
ZRA Smart Invoice VSDC Signing	Mandatory electronic fiscalization for all commercial client invoices.	Direct VSDC API submission with receipt signatures, QR codes and auto-retry crons.

Automatic 12-hour midnight shift splitting

Guards working 12-hour shifts from 18:00–06:00 cross midnight into different pay categories. DeployGuard parses posting timestamps and splits hours into exact statutory pay buckets automatically:

Normal hours Standard daytime shift hours, calculated against the guard's base pay rate.	Night shift allowance Hours worked between 18:00 and 06:00, at the applicable night-shift multiplier.
Sunday & public holiday Automated 2.0x double-time multiplier applied without manual timesheet adjustment.	

34 CUSTOM SECURITY OPERATIONS MODULES, BUILT IN

Complete suite map

Every layer of a Zambian security operation, connected — from guard grading through to fiscal invoicing.

Guard Ranks & Profiles	Guard profiles, grade ranks (A/B/C), certification expiry alerts, medical fitness, site exclusions, biometric fingerprint mapping.
Rostering Hub	Roster Board calendar view, unassigned-slot flagging, automated guard matching with full score breakdown, rest-hour checks.
Attendance Console	Posting console, mobile Expo app with GPS geofencing, WhatsApp check-in bridge, attendance heatmaps and history logs.
Statutory Payroll Engine	Payroll command centre, midnight shift bucket splits, NAPSA/NHIMA/PAYE rules, staff loan recovery, QWeb payslip designer.
Client Billing & ZRA	Verified client attendance service reports, auto-generated invoices, ZRA Smart Invoice VSDC native signing and QR codes.
Equipment, Fleet & Discipline	Firearms and radio register, uniform issue tracking, shuttle transport runs and fuel logs, behavioral incident and disciplinary fines.

Flexible enterprise deployment

DeployGuard Cloud SaaS Hosted in secure regional cloud data centers. Automatic updates, managed backups and a 99.9% uptime SLA.	On-Premises Private Instance Full Docker Compose container package. Runs on your private Linux server in Lusaka with complete data sovereignty.
