

DeployGuard OS

The Intelligent Operating System Built for Private Security Operations

Stop losing profit to roster chaos, ghost guards, and statutory payroll errors. DeployGuard integrates explainable AI guard scoring, hard compliance gates, WhatsApp field check-ins, Namibian & Zambian statutory payroll, and native ZRA Smart Invoicing into one complete enterprise platform.

■■ Namibia Compliant PAYE brackets, SSC N\$108 cap, public holiday overtime & Labour Act rules.	■■ Zambia ZRA Native NAPSA, NHIMA, WCF, & direct ZRA Smart Invoice VSDC fiscal signing.
■ Explainable Scoring Transparent guard assignment math (reliability, grade, fairness, AWOL history).	■ WhatsApp Field AI Field supervisor check-ins, AWOL logs & replacement requests on WhatsApp.

Target Platforms: Web, iOS/Android (Expo), WhatsApp Bridge · **Core Monolith:** Odoo 19 Community Monolith
Deployment Modes: DeployGuard Cloud SaaS / On-Premises Private Docker Instance

Executive Summary: Stopping Revenue Leakage

Private security companies operate on thin margins where minor operational errors compounding across hundreds of guards can eradicate annual profitability. Paper posting sheets, manual Excel rosters, and generic payroll systems introduce three major cost traps:

Cost Trap	Industry Mechanism	DeployGuard Fix
1. Ghost Guard Sign-Ins	Supervisors sign off on shifts that were never worked. Manual timesheets cannot be audited retroactively.	GPS Mobile Check-In & WhatsApp Bridge enforces site geofencing & real-time guard photo verification.
2. Roster Overtime Blowouts	Manual scheduling fails to track rest periods, causing double-time rates and supervisor favoritism disputes.	Explainable Guard Scoring evaluates fairness & rest hours automatically before post assignment.
3. Billing Disputes & Late Invoices	Clients dispute hours due to missing posting logs, delaying payments for 60–90 days.	Client Service Reports attach verified guard attendance logs directly to fiscally signed invoices.

Quantifiable Financial Impact

3.5% – 6.0% Revenue Recovered Elimination of unworked ghost shifts and billing errors.	85% Reduction Roster Prep Time Automated guard matching reduces days of manual Excel work to minutes.	Zero Statutory Fines 100% Tax Accuracy Built-in Namibian PAYE/SSC & Zambian NAPSA/ZRA compliance rules.

Core Differentiators: Built for Security Operations

1. Explainable Guard Scoring (score_breakdown)

Competitors offer a black-box 'auto-fill' button that leaves controllers confused about why specific guards were assigned. DeployGuard features a transparent, weighted scoring engine (`security_shift_planner.py`). Every suggested assignment generates an explicit point breakdown:

95 / 100

2. Hard Compliance Gates (Liability Shield)

Most platforms issue soft warnings that supervisors ignore under pressure. DeployGuard enforces **hard compliance gates** during post assignment. The system physically blocks assignment if a guard has an expired firearm license, lacks required grade certification, is excluded from a site, or is on approved leave. This protects your firm from client contract penalties and legal liability.

3. WhatsApp Field AI Assistant Bridge

Field supervisors don't always have laptops or high-speed data. DeployGuard includes a native **WhatsApp AI Bridge** (`security_ai_whatsapp_bridge`). Supervisors can report shift arrivals, log AWOL guards, and request replacement candidates over WhatsApp text or voice notes. All incoming field messages stream into an in-Odoo conversational workspace for central dispatchers.

Regional Statutory Compliance & Billing

Local Tax, Statutory Caps, & Midnight Shift Splits

Generic ERPs fail at African labor law and 12-hour night shift calculations. DeployGuard features deep statutory localization modules for Namibia (``security_l10n_na``) and Zambia (``security_l10n_zm``).

Country	Statutory Rules Built-In	Fiscal & Deduction Features
■■ Namibia (Labour Act Ch. 11:11)	• SSC 0.9% employee/employer split capped @ N\$108/mo. • PAYE 2024–2026 progressive tax brackets. • Public holiday & Sunday double-time multipliers.	• Equipment damage salary deductions. • Uniform deposit repayment schedules. • Staff loan advance recovery hooks.
■■ Zambia (Labor Code & ZRA)	• NAPSA 5% employee + 5% employer (annual cap enforced). • NHIMA 0.5% + 0.5% health insurance split. • Workers Compensation Fund (WCF) levy calculation.	• ZRA Smart Invoice VSDC native API signing. • Direct QR code & receipt signature on client billing. • Exponential backoff auto-retry crons for offline sites.

Automatic Midnight Shift Hour Splitting

A typical 12-hour guard shift runs from 18:00 to 06:00, crossing midnight. DeployGuard automatically parses posting times and splits hours into exact statutory pay buckets:

Normal Hours	Night Shift Allowance	Sunday & Public Holiday
Standard weekday daytime rate	Hours worked between 18:00 – 06:00	Automated double-time multiplier

Complete Module Map & System Architecture

End-to-End Operational Suite (34 Custom Modules)

Module Layer	Included Operational Features
Core Guard Operations	Guard profiles, grade ranks, cert expiration alerts, medical fitness, site exclusions, biometric fingerprint mapping.
Smart Rostering & Planning	Roster Board calendar view, unassigned slot flagging, automated guard matching with score_breakdown, rest hour checks.
Attendance & Field Verification	Posting Console, Mobile Expo App (GPS geofence), WhatsApp check-in bridge, attendance heatmaps & history logs.
Statutory Payroll Engine	Payroll Command Center, midnight shift bucket splits, NAM/ZM tax rules, loan/damage deductions, QWeb Payslip Designer.
Client Billing & Fiscal Invoicing	Verified client attendance service reports, auto-generated invoices, ZRA Smart Invoice VSDC native signing & QR codes.
Assets, Fleet & Discipline	Firearms & radio register, uniform issue tracking, shuttle transport runs & fuel logs, behavioral incident disciplinary fines.

Flexible Enterprise Deployment Options

DeployGuard Cloud SaaS Hosted in highly secure African cloud data centers. Automatic updates, managed backups, and 99.9% uptime SLA.	On-Premises Private Instance Full Docker Compose container package. Runs on your private Linux server with complete data sovereignty.

Schedule Your 15-Minute Operational Audit

Ready to Modernize Your Security Operations?

Our regional operations specialists in Windhoek and Lusaka will review your existing Excel rosters, configure your local statutory payroll rules, and run a live 15-minute demonstration using your actual guard count.

- Website & Demo Booking: <https://deployguard.io>
- ✉ ■ Direct Contact Email: hello@deployguard.io
- WhatsApp Operations Line: +264 81 123 4567 / +260 97 123 4567
- Regional Offices: Windhoek, Namibia · Lusaka, Zambia

The DeployGuard Onboarding Guarantee

✓ 7-Day Risk-Free Trial Every feature unlocked from day one with full support.	✓ 1-Day Data Import We import your guards, sites, and client rates into the platform.
✓ Local Payroll Audit We verify your statutory tax rules before your first pay run.	✓ WhatsApp Staff Onboarding Supervisors onboarded via WhatsApp in under 30 minutes.
